## Landa Nest

8th April 2020

Nest is a willow weave made by hand and subjected to a nanoparticle paint treatment for maximum resistance to atmospheric agents. Designed to be placed in the grooves of trees, with 8W LED light source, it emits a full beam of light upwards with a colour temperature of 3000K. Opal screen for diffused light, Nest is available in Ø17cm and Ø23.5cm; an IP65 protection degree that makes it ideal for outdoor applications.
