

[LND] LIGHTING EXPANDS THE LAKO RANGE: THREE-DIMENSIONAL MINIMALISM

25 May 2021

Landa expands the Lako line (wall and bollard products) with new variants. Increasing the quality of lighting solution offered, [LND] aspires to meet the needs of professionals in the field, offering an updated and wide catalog. Lako is a product line that interprets minimalism through clean lines and simple shapes, combining them with high performance. The three-dimensionality of Lako, a family composed of wall-mounted and floor-standing luminaires, is characterized by the cylindrical shapes of the fixtures and a modern aesthetic that can be easily integrated into various types of outdoor environments. Highly technological in its simplicity, Lako is an expression of light that is perfect for illuminating and enhancing driveways and walkways in parks and gardens.

The luminous beam of Lako, with a choice of single or double emission, produces an asymmetrical light with a soft and never invasive effect. The applications are characterized by a LED light source; while the 6W (108 lumens) and 9W (260 lumens) powers, accept a new and more powerful 18,5W (530 lumens) option. Another variation is represented by a new bollard height: 118,5 cm. Designed to offer a more imposing presence but still discreet in style, this version of Lako is aligned with the others for all the other technical specifications, to guarantee quality and performance. With a color temperature of 3000 K and a 220-240 Vac power supply at 50-60 Hz (class A++), the product is characterized by an opal screen, body in die-cast aluminum EN-47100 and extruded aluminum EN-AW6060.

Lako is designed to respond perfectly to weather and external agents: IP65 certified protection, protects the luminaire from water splashes and dust infiltration; while IK08 protects it from damages from foreign objects (up to 5 Joules). Lako's powder coat finish is available in graphite or oxide. Lako, just like any other product in the range of [LND] lighting, undergoes the application of specific anti-oxidation treatments carried out directly inside the company to make the product virtually indestructible and allow the final customer to amortize the subsequent maintenance operations and extend the life cycle of the lamp.

[LND] Lighting, a company established in 1987 in Lumezzane in the province of Brescia and specialized in outdoor lighting, which has long been synonymous with a commitment to R&D, expands the range of products offered in the ambition to provide more choice to prescribers and designers in the industry, thus helping to create unique scenarios of outdoor lighting and performance.
